

**WHAT IS CLAIMED IS:**

1. A modeled cream bottle comprises

a model having a receiving house and a receiving chamber beside the receiving house; an upper side of the receiving house having an outlet; a  
5 first and a second guiding spaces being installed at an upper side of the receiving chamber for guiding a flow of cream; the first guiding space being communicated to the receiving chamber and the second guiding space being communicated to the receiving house;

a bottle body received in receiving chamber of the model; an upper  
10 periphery of the bottle body being formed with an outer thread and a bottom thereof having a recess; the outer thread at the outer periphery of the bottle body being screwed with an inner thread of the receiving chamber; the bottle body being firmly secured to an interior of the model;

a press head; an upper portion of the press head protruding from the  
15 outlet of the receiving house, a button being fixed to the press head so that the button being pressed conveniently for extruding cream out of the bottle body; the press head having an outlet portion and an inlet portion;

a first guide tube being connected to the outlet portion; the first guide tube communicating to the outlet portion of the press head having a  
20 section being receiving in the first guiding space and having a section thereof protruding out of the first guiding space;

a second guiding tube being connected to the inlet portion; one end of the second guide tube extending into a bottom of the receiving chamber through the second guiding space and another end of the second guide tube  
25 extending into an inner bottom of the bottle body through the second

guiding space so as to suck cream at the bottom of the bottle body by pressing the press head;

wherein by pressing the press head, the cream in the bottle body is sucked out from the guide tube to be guided to an inlet portion of the press  
5 head and then flow to the guide tube of the outlet portion; thereby, the cream will be extruded to be out of the model.

2. The modeled cream bottle as claimed in claim 1, wherein a bottom of the bottle body has a fixing unit for fixing a lower cover so that the model has a flat bottom; the unit has a hole so that the bottle body is  
10 inserted into the model from a lower side of the model.
